

State of the art technology enabling coverage in any environment

A Distributed Antenna System (DAS) or In-Building Coverage (IBC) is a solution designed to improve and extend cellular and two-way radio coverage in buildings, offices, tunnels and large venues such as stadiums, hospitals, universities, shopping centres, airports and car parks.

We can design and deliver carrier compliant active and passive DAS infrastructure, to meet your specific coverage requirements.

Distributed Antenna System Features and Benefits

- ✔ Suitable for all building types
- ✔ Ideal for challenging cellular and radio coverage environments
- ✔ Enable secure and stable coverage for mobile/cellular and radio communications
- ✔ Dedicated and improved capacity coverage
- ✔ Improved battery life of devices
- ✔ Resolves coverage blackspot challenges
- ✔ Passive and Active DAS options available
- ✔ 5G and 5G compatibility options available
- ✔ Remote monitoring and maintenance options

Customer Representation

We serve as the owner’s representative and interact with other trades and the carrier.

Procurement

We can supply all the hardware for active and passive DAS systems, carrier connect ready.

Post Installation

We perform system validation to ensure compliance with the design requirements.

System Design

We use tools such as iBwave® to design the DAS solutions.

Installation

We have trained & certified installation and commissioning technicians.

24/7 Support

Ongoing support with our national 24/7 service team.

Our DAS and IBC experts work with you to develop a customised solution based on your site’s conditions and any building management requirements. We stay involved throughout permitting, construction and installation of your system. We have deployed hundreds of DAS installations across Australia, providing our customers with superior coverage.

About Progility Technologies

We are a leading critical communications technology partner in Australia. We understand that having efficient and robust communications can mean the difference between success and failure, profit & loss and sometimes, life and death. Designing and delivering these systems is only the beginning. Ongoing support is crucial to optimising the performance of your communications system.

Our Clients

Our clients span across Construction, Manufacturing, Transport, Logistics & Warehousing, Banking & Finance, Retail & Hospitality, Mining, Oil, Gas & Energy, Utilities, Education, Security & Public Safety, Facilities, Venues & Public Precincts, Government, Health and Aged Care.

Our National Presence & 24/7 Support Team

Four locations across Australia - Melbourne, Sydney, Brisbane and Perth + regional Victorian operations.

We offer the very best in technology and operational support services across all our products and solutions, including our 24/7 support help desk and remote service team.

Enabling critical communications in the moments that matter – connecting people, information, experiences and technology.
